Emre Kolunsağ SAP ABAP Consultant / Software Engineer

Istanbul, Türkiye • +90 534 834 98 13 • emrekolunsag@gmail.com • linkedin.com/in/emrekolunsag • github.com/kolsagg

Summary

Software Engineering graduate with two years of experience as an SAP ABAP Consultant on enterprise projects. Specialised in designing, optimising and delivering SAP-compliant technical solutions and module developments in S/4HANA Greenfield and migration projects using BTE, User-Exits, Enhancements, BAPIs and Web Services (REST/SOAP). Experienced in automating FI module processes through virtual POS and e-Transformation (e-Invoice) integrations. A modern web/software development background (TypeScript, Python, SQL) brings a holistic and proactive problem-solving approach to SAP and external system integrations.

Skills

SAP & ABAP Technologies: ABAP Programming, ABAP Objects, Open SQL, BTE, User-Exit, Enhancements, BAPI, Web Services (REST/SOAP), SAP FI Module
SAP Migration & Integration: SAP S/4HANA Greenfield Implementation, S/4HANA Migration, Virtual POS Integration, Electronic Solution Integration (e-Transformation), Accruals/Deferrals
Development Tools & Databases: SAP GUI, HANA DB, PostgreSQL, MySQL, Supabase, Git, Postman, SOAPUI, REST API
Other Programming Languages: TypeScript, Python, JavaScript, Java, HTML/CSS, React.js, Node.js
Languages: Turkish (Native), English (Intermediate)

Work Experience

ConcentIT. ***(Istanbul, Türkiye)***
SAP ABAP Consultant / Developer December 2024 – Present
- Developed custom ABAP programs, reports and enhancements tailored to customer requirements in SAP S/4HANA migration and greenfield implementation projects.
- Carried out ABAP debugging, performance optimisation and technical support to minimise system disruptions in customer processes.
- Designed custom integration and automation solutions supporting business processes, primarily in the FI module.

Kartelam, Fabriqa Inovation A.Ş. ***(Istanbul, Türkiye)***
Long-Term Intern – Full-Stack Developer October 2023 – November 2024
- Built scalable web applications and backend architectures, applying software engineering principles and code quality standards.
- Worked with cross-functional teams to support production deployments and system integration processes.

SAP Project Experience

Coşkunöz Holding — *S/4HANA Greenfield Implementation*
- Developed custom ABAP programs and ALV reports for end-to-end business processes

İlbak Holding — *S/4HANA Migration*
- Migrated custom programs and forms to the new data model
- Performed S/4HANA compatibility fixes and post-conversion technical testing

Limak Holding — *Virtual POS Integration (FI)*
- Developed a REST Web Service that forwards open invoices to the virtual POS payment portal
- Developed an ABAP background job program that automatically posts incoming payments
- Built an ALV report and cockpit screen in the FI module for easy process monitoring

Kılıç Deniz — *Electronic Solution (e-Transformation) Integration*
- Developed Web Services and BTE/User-Exits for external system – SAP data flow
- Delivered custom program and form adaptations for the FI module

JCI — *Accrual/Deferral Processes*
- Developed ABAP solutions automating financial calculations
- Implemented business process improvements aligned with accrual/deferral logic

Bilkent Holding — *Support Services*
- Provided ABAP technical support for the FI module
- Enhanced existing programs/reports and maintained SmartForms and enhancements

Limak Holding — *Support Services*
- Performed routine ABAP development and debugging-based troubleshooting
- Supported business process optimisation

Atakaş Holding — *Support Services*

- Provided ongoing ABAP technical support
- Delivered report, program and exit developments on the production system

AGT — *Support Services*
- Provided ABAP development support, mainly within the FI module
- Delivered form/report improvements and business process optimisations

IATCO — *Support Services*
- Provided ongoing ABAP support and FI module developments
- Resolved technical issues on the production system through debugging

Other Software Projects

Receipt OCR Expense Tracking App (Web & Mobile) *Python, FastAPI, PostgreSQL, OpenAI, Flutter*
- Built an AI-powered OCR service that automatically reads totals, VAT and line items from receipt photos
- Developed web and mobile expense tracking apps that multiple companies can use independently
- Integrated with SAP to process receipts sent from SAP in batches

AI-Powered Social Media Content Automation *Next.js, PostgreSQL*
- Designed a system that generates on-brand visuals and copy and auto-publishes to LinkedIn/Instagram/Facebook after approval
- Designed a feedback loop that measures post performance to improve future content, plus automatic special-day content planning

Ticket-Driven AI Software Delivery Pipeline *TypeScript, Claude Agent SDK, SQLite, Git*
- Built a local system that turns a work ticket into review-ready code using AI agents
- Designed human approval at the plan and code review steps, with safe resumption of interrupted runs

AI-Assisted Personal Finance Tracking Mobile App *Flutter, Python, Supabase, Ollama*
- Developed an expense tracking mobile app with QR receipt scanning and AI-assisted recommendations
- Designed a secure Python backend that encrypts user data in JSON format with AES-256
- Built a responsive, user-friendly interface with Flutter
- Integrated Supabase for authentication and database management
- Applied Agile (Scrum) methodology throughout the development process

Education

Istanbul Aydın University Istanbul, Türkiye
B.Sc. in Software Engineering (English) 2020 – 2025 (Graduation: October 2025)
